
Target and coordinate contract
R control / Python protocol; explicit capability checks
Stan / BridgeStan
CPU sequential MH only
No time-parallel route
Explicit JAX target
CPU sequential / time MH
BlackJAX NUTS
Explicit torch target
CPU / CUDA MH routes
Python host control
Kernel, executor and resource records
MH: actual random arrays; sequential or matched time executor
NUTS: own RNG / adaptation; CPU Pyro is a separate research CLI
Separate numerical checks and measured costs
Independent path / event reference where provided; transform checks
Residuals / stopping causes; ordinary process / research audit costs
Numerically valid output
Draws + run record
Statistical diagnostics still required
Failure or interruption record
Cause + raw evidence + known costs
No ordinary posterior sample
