

Target and coordinates
R control / Python model interface

Stan / BridgeStan

CPU sequential MH
No time executor

Native JAX target

CPU MH / time execution
BlackJAX NUTS

Native torch target

CPU / CUDA MH
Python host control

Kernel / executor / resource records

MH: shared actual random arrays
CPU Pyro NUTS: separate research CLI

Numerical checks and measured costs

Independent path and event reference where provided
Residuals / failures / ordinary and audit costs

Numerically valid output

Draws and run record
Statistical checks follow

Failure record

Cause and retained evidence
No ordinary draws
